

Project „Feeding the World trough ECVET in Agriculture“

The project partners aim to enhance food production in Europe. Production methods, processing, transport, logistics and trade should become larger and more efficient. The partners will reach these objectives by investing in distributing specialist knowledge and skills from the various partner countries all over Europe. Their key to do this is international Vocational Education in the field of Agriculture.

The project brings together two ECVET networks in the field of Agriculture: AHENE and AgriECVET. Together with additional new educational partners, qualification, curriculum and learning material specialists, the network partners will devote themselves to the development of international learning modules in specialist fields of food production and related activities. These modules will aim at various specialist knowledge and techniques from each partner country: National specialties. The modules will be developed and offered to the vocational students of all partner institutions in an international carousel.

Activities:

- Teacher training in National specialties and didactics
- Development of innovative educational materials about specialist topics related to food techniques in the participating countries
- Exchanging students
- Finding improved methods for recognition of learning activities internationally in the home curricula

Results:

- 12 educational modules in the field of food production, processing, transport, logistics and trade
- 1 manual for the recognition of International learning activities in the agricultural sector
- 25 Teachers trained in the various partner specialties
- 72 students trained in relevant International agricultural knowledge and skills.
